Why *GreenSwitch™* - Guest Room Energy Control Systems

- ◆ Reduce Guest Room energy usage by 25%-45%
- ◆ Payback on investment from 1 to 2 years
- ◆ Only Guest Room Energy Management System on the market that completely controls guest room HVAC energy costs as well as Lighting and Sliding Door and ele electrical loads
- ◆ Wireless - using microchip control RF (radio frequency) communication - no need to connect parts with hard wires
- ◆ Average room installed in less than 30 minutes
- ◆ No "dead spots" in the room as with motion and IR sensors - Ideal for multi-room suites - 150 foot through wall range
- ◆ Specifically designed to control both guest room HVAC operating temperatures, plug load, and lighting control
- ◆ Extends the useful life of HVAC systems, lights and TVs
- ◆ Allows the Guest to participate in the energy saving process, they become proactive partners in reducing energy consumption and creating a healthier environment. Available in keyless switch too
- ◆ Significantly reduces guest room lockout caused by key cards left in the room
- ◆ Eliminates the possibility of the guest feeling monitored as can happen with wall or ceiling mounted motion sensor systems
- ◆ Works with all types of guest room HVAC systems and voltages
- ◆ Easily maintained by hotel personnel - a repair is as simple as changing out a wall switch or receptacle
- ◆ 18 Month 100% parts warranty
- ◆ System is "Positive" and always knows if the room is occupied or vacant
- ◆ System maybe overridden, room by room, at guest request – other systems cannot be easily overridden on a per room basis
- ◆ Our company is a proud member of the US Governments *Energy Star* program
- ◆ We provide a *NO COST* property specific energy analysis that identifies current energy costs and calculates the savings that will be obtained by the installation of the *GreenSwitch™* System
